EXPERIENCE

Security Engineer (Contract)

Feb 2025 – Present

Meshify

Remote

- Led API testing initiatives for the authentication feature by reviewing technical documentation, designing targeted test cases, and collaborating with developers; increased testing ticket throughput by 60%
- Executed and maintained PostgreSQL/SQL queries for API validation, including schema reviews, table descriptions, cross-database connections, and controlled data insert/update operations to confirm accurate functionality for create, delete, and update workflows.
- Performed peer code reviews prior to deployment, validating environment configurations and product versions; prevented deployment errors.
- Integrated Oxipng into CI/CD pipelines to compress large images without quality loss; optimized website performance and reduced bandwidth usage.
- Integrated Dastardly into automated CI/CD pipelines using CircleCI to perform DAST; identified and remediated vulnerabilities earlier in the development cycle, reducing production security incidents.
- Deployed and managed containerized applications in Kubernetes by configuring namespaces, Helm charts, and network services; enabled scalable, fault-tolerant infrastructure.
- Managed and secured SaaS applications by implementing 2FA and SSO for passwordless authentication; strengthened access security and simplified user onboarding across multiple platforms.
- Optimized cloud infrastructure by replacing instances and upgrading instance types; improved performance, enhanced scalability, and reduced operational costs.
- Supported SOC 2 audits by compiling technical evidence, producing security documentation, and streamlining compliance reporting.
- Monitored and triaged Jira tickets across security and development teams, improving resolution time by **35%** through structured prioritization and follow-up.
- Conducted DR testing by validating backup integrity and recovery procedures; ensured availability and compliance with RTOs, and documented results for audit readiness.

IT Security Administrator/ Test Engineer (Contract)

Feb 2023 – Feb 2025

Meshify

Remote

- Streamlined user administration across multiple platforms while adhering to Role-Based Access Control (RBAC) standards. This initiative resulted in a notable reduction of \$4,000 in monthly operational costs.
- Contributed to achieving SOC 2 compliance by conducting audits of 97 vendors utilized by the organization, ensuring adherence to security standards and regulatory requirements.
- Orchestrated the integration of single sign-on (SSO) across 3 applications using Google Cloud Platform/Workspace, enhancing user authentication and access management efficiency.
- Configured and implemented 2 dynamic application security testing solutions within the CircleCI CI/CD pipeline, providing thorough black box testing of applications and helping to develop strategies to remediate potential vulnerabilities and threats.
- Harnessed Terraform to automate infrastructure provisioning and management for AWS environments, adhering to Infrastructure as Code (IaC) principles
- Crafted and upheld security policies and procedures to ensure robust protection and compliance.

Cloud Analyst

Nov. 2022 – Feb 2025

MEDITECH

Canton, MA

- Deployed 5 cloud-native services and applications to support internal operations and customer-facing environments, catering to diverse business needs and enhancing overall service delivery.
- Automated the creation and management of over 200 firewall rules using Terraform, assuring seamless integration with existing infrastructure and enhancing network security measure.
- Provided troubleshooting support to address 20 network issues reported by customers, ensuring timely resolution and maintaining high levels of customer satisfaction.
- Leveraged OpenSSL to generate 15+ Certificate Signing Requests (CSRs) for X.509 certificates, and successfully installed certificates in the Windows Store Manager, securing public communication channels.
- Administered server patch management through WSUS, ensuring systems remained secure with the latest updates and security patching.
- Automated tenant provisioning and infrastructure maintenance using Terraform, with a focus on creating VPCs, APIs, IAM policies, and managing virtual machines (VMs) to streamline cloud deployments.

System and Support Analyst II (Contract)

Aug 2022 – Nov 2022

Mingledorffs

Peachtree Corners, GA

- Acted as the first line of defense in addressing 2 security incidents and assisted in analyzing dashboard data to help identify potential threats, contributing to the company's efforts in maintaining a secure environment.
- Administered Active Directory (AD) by creating a combined 50 users, groups and organizational units following least privilege, complying with security standards and reducing risk of unauthorized access.
- Provided Microsoft Exchange email support to 300 users, allowing seamless communication for users and troubleshooting any issues, maintaining uninterrupted email services.
- Utilized Mimecast to analyze and respond to 10+ alerts daily, effectively identifying and mitigating spam and phishing threats, thus bolstering enterprise security posture and protecting sensitive data.
- Improved security posture for 75 endpoints by managing patch updates, assisting end-users, remotely installing software, and proactively pushing updates to enhance endpoint security.

IT Support Specialist

April 2022 – Aug 2022

Chicken Salad Chick

Atlanta, GA

- Implemented user account management in Azure AD(Microsoft Entra), providing access for 150 franchisees and company employees while enhancing security through the configuration of multi-factor authentication (MFA) to protect user accounts in the cloud environment.
- Conducted remote troubleshooting and diagnostics of switches, routers, and audio equipment located in the 20 store's network closet to promptly identify and resolve device issues, ensuring rapid restoration of network connectivity and uninterrupted operations for stores.
- Deployed static IP addressing configuration for 10+ devices via the firewall to ensure secure and reliable connectivity for franchise and corporate stores, enhancing network stability and operational security.
- Assisted in managing the KnowBe4 platform and contributed to running the security awareness program for over 100 employees, improving cybersecurity training and resources, resulting in a higher employee awareness and compliance with security policies.

EDUCATION

Western Governors University

Sept 2025 – Present

B.S. in Computer Science, Remote

Gwinnett Technical College

Aug 2021 – Dec 2023

Associate's in Cybersecurity, Lawrenceville, GA

CERTIFICATIONS

CompTIA Security+

AWS Certified Cloud Practitioner

AWS Solutions Architect (AWSAA)

Certified Kubernetes Administrator (CKA)

HashiCorp Terraform Associate (003)

Red Hat Certified System Administrator (RHCSA)

TECHNICAL SKILLS

Languages / Development: Golang (Go), Python, Bash, PowerShell, Terraform, Ansible

AppSec / Security Tools: Dastardly (DAST), OWASP ZAP, Burp Suite, Wireshark, Metasploit, MFA

Containers / Orchestration: Kubernetes (K8s), Docker, Helm, ECS/ECR

Cloud / DevOps: AWS, Azure, GCP, CircleCI, ArgoCD, Terraform (IaC)

Developer Tools: Git, Postman, VS Code, Codium, GitHub, Bitbucket

Compliance / Governance: SOC 2, GDPR

Collaboration: Slack, Jira, Confluence, Discord, MS Teams, Google Workspace, MS O365

SECURITY PROJECTS

ASR-as-Code | <https://github.com/J-c0d3-4Fun/ASR-as-Code> | AWS SDK, Golang (Go)

Aug. 2025 - Present

Developed ASR-as-Code, a Go-powered open-source framework leveraging the AWS SDK to automate cloud misconfiguration detection (S3 encryption, access controls, policies) and provide remediation guidance, with a roadmap to extend coverage to IAM, EC2, and VPC

Offensive Security and Bug Bounty Hunting

Active participant in Hack The Box CBBH labs and PortSwigger Web Security Academy; gained hands-on experience with real-world web app vulnerabilities and exploit chains.
