PROFESSIONAL SUMMARY

Security Engineer with expertise in DevSecOps, CI/CD pipeline security, application security auditing, and infrastructure automation. Experienced in Go and C systems development, software supply chain security, and web/Active Directory exploitation. Proficient in Kubernetes, Helm, Terraform, Pulumi, DAST/SCA tooling, and cloud security controls across AWS and enterprise environments.

EXPERIENCE

Security Engineer

Feb 2025 – Present

Meshify

Remote

- Build a parser and notifier integrating Dastardly DAST output into CircleCI pipelines, delivering real-time vulnerability alerts and shifting security left in the development cycle.
- Identify vulnerable direct and transitive NPM dependencies, evaluate affected versions, and contribute remediation PRs to update vulnerable packages.
- Build SLSA-compliant workflows incorporating software composition analysis, manifest inspection, and SBOM generation.
- Construct multi-architecture container images via CI/CD pipeline to enable developers across different hardware environments to run application images consistently.
- Migrate a multi-architecture service from a monolithic architecture into production over 6+ months, collaborating with developers throughout design, implementation, and deployment.
- Examine AWS snapshots for compliance adherence, identifying unencrypted snapshots, archiving them, and converting them to encrypted snapshots.
- Integrate OSV Scanner and Amazon Inspector for EC2 scanning into security workflows, extending vulnerability detection coverage across dependencies and compute resources.
- Lead migration from Terraform to Pulumi to automate infrastructure-as-code workflows and enable automated drift detection.
- Automate software provisioning across infrastructure using Ansible.
- Perform peer code reviews prior to deployment to validate environment configurations and product versions, supporting secure SDLC practices.
- Support SOC 2 audits by compiling technical evidence, producing security documentation, and streamlining compliance reporting.
- Lead deployment of new features by designing and managing Helm charts, configuring Kubernetes namespaces and network services, and enforcing deployment standards for scalable, fault-tolerant infrastructure.
- Build and deploy a log aggregation script uploading Linux machine logs to S3 buckets, improving log retention by 100% and reducing local storage footprint in direct support of SOC 2 audit requirements.
- Monitor and triage Jira tickets across security and development teams, improving resolution time by 35% through structured prioritization and follow-up.

IT Security Administrator / Test Engineer (Contract)

Feb 2023 – Feb 2025

Meshify

Remote

- Streamlined user administration across multiple platforms while adhering to RBAC standards, reducing monthly operational costs by \$4,000.
- Achieved SOC 2 compliance by conducting audits of 97 vendors within the organization, ensuring adherence to security standards and regulatory requirements.
- Implemented SSO across applications using Google Cloud Platform/Workspace, enhancing user authentication and access management efficiency.
- Used Terraform to automate infrastructure provisioning and management for AWS environments, adhering to Infrastructure as Code (IaC) principles.
- Established and maintained security policies and procedures to ensure robust protection and compliance.

Cloud Analyst

Nov 2022 – Feb 2025

MEDITECH

Canton, MA

- Automated creation and management of 200+ firewall rules using Terraform, ensuring seamless integration with existing infrastructure and enhancing network security.
- Automated tenant provisioning and infrastructure maintenance using Terraform, including VPCs, APIs, IAM policies, and virtual machine management to streamline cloud deployments.
- Leveraged OpenSSL to generate 15+ Certificate Signing Requests (CSRs) for X.509 certificates and installed certificates in the Windows Store Manager, securing public communication channels.
- Deployed 5 cloud-native services and applications to support internal operations and customer-facing environments.

- Resolved 20 network issues reported by customers, ensuring timely resolution and high customer satisfaction.
- Administered server patch management through WSUS, maintaining system security with current updates and patches.

System and Support Analyst II (Contract)

Aug 2022 – Nov 2022

Mingledorffs

Peachtree Corners, GA

- Administered Active Directory by creating 50+ users, groups, and organizational units following least privilege principles, reducing risk of unauthorized access.
- Utilized Mimecast to analyze and respond to 10+ alerts daily, identifying and mitigating spam and phishing threats to bolster enterprise security posture.
- Improved security posture for 75 endpoints by managing patch updates, remotely installing software, and proactively pushing updates.
- Provided Microsoft Exchange email support to 300 users, maintaining uninterrupted email services.

IT Support Specialist

Apr 2022 – Aug 2022

Chicken Salad Chick

Atlanta, GA

- Implemented user account management in Azure AD (Microsoft Entra), providing access for 150 franchisees and employees while configuring multi-factor authentication (MFA).
- Managed KnowBe4 security awareness program for 100+ employees, improving cybersecurity training and policy compliance.

EDUCATION

Dakota State University

Expected May 2028

Bachelor of Science in Cyber Operations, Minor in Quantum Computing

Madison, SD

Gwinnett Technical College

Dec 2023

Associate's in Cybersecurity

Lawrenceville, GA

CERTIFICATIONS

CompTIA Security+

AWS Certified Cloud Practitioner

AWS Solutions Architect (AWS SAA)

eJPTv2 (Junior Penetration Tester)

Certified Kubernetes Administrator (CKA)

HashiCorp Terraform Associate (003)

Red Hat Certified System Administrator (RHCSA)

TECHNICAL SKILLS

Languages / Scripting: Go (Golang), Python, C, Bash, PowerShell, SQL

AppSec / Security Tools: DAST/SAST, SCA, Dependabot (GitHub), SLSA Framework, SBOM, Burp Suite, Dastardly, OWASP ZAP, OSV Scanner, Amazon Inspector

Offensive Security: Penetration Testing, Active Directory Exploitation, Metasploit, Hashcat, Dislocker, Wireshark

Containers / Orchestration: Kubernetes (K8s), Docker, Helm, ECS/ECR

Cloud / DevOps: AWS (IAM, EC2, S3, VPC), Azure, GCP, CircleCI, GitHub Actions, Terraform, Pulumi, Ansible, Make

Identity / Access: SAML, SSO, MFA, GCP Workspace, Azure AD / Microsoft Entra ID, RBAC, Least Privilege

Compliance / Governance: SOC 2 Type II, GDPR

SECURITY PROJECTS

ASR-as-Code | <https://github.com/J-c0d3-4Fun/ASR-as-Code> | AWS SDK, Go

Aug 2025 – Present

Developed an open-source Go framework using the AWS SDK to automate cloud misconfiguration detection across encryption, access controls, and policies.

CVE Dashboard | Go, REST APIs, NVD, GitHub Advisories

Engineered a vulnerability tracking application in Go that ingests NVD and GitHub Security Advisory data, surfacing real-time vulnerability metrics through a searchable web UI.

C Systems & Offensive Tooling Sandbox | <https://github.com/J-c0d3-4Fun/C-Dev-Sandbox> | C, Systems Programming

Engineering journal covering C fundamentals, memory management, pointer manipulation, and raw sockets as a foundation for building custom offensive security tools and exploit payloads.

Active Directory Attacks Lab by Altered Security

2025 – Present

Lab training covering Active Directory exploitation techniques, lateral movement, privilege escalation, and post-exploitation strategies in enterprise environments.

Offensive Security Research & Active Labs

Actively executing web application exploit chains via PortSwigger Web Security Academy and HTB CBBH labs.
