PROFESSIONAL SUMMARY

Security Engineer with expertise in DevSecOps, CI/CD security, and infrastructure automation. Building specialized knowledge in Red Team operations and offensive security through systems programming and Windows/AD exploitation. Proficient in Kubernetes, Helm, Terraform, application security tooling, and low-level systems development.

EXPERIENCE

Security Engineer (Contract)

Feb 2025 – Present

Meshify

Remote

- Developed parser and notifier that integrates Dastardly DAST output into CircleCI pipelines, providing real-time vulnerability alerts; identifying and remediating vulnerabilities earlier in development cycle, reducing production security incidents
- Engineer a vulnerability tracking dashboard using an internal API to query the National Vulnerability Database and GitHub Advisories, enabling real-time vulnerability monitoring
- Build and deploy a log aggregation script that uploads Linux machine logs to S3 buckets, improving log retention by 100% and reducing local storage footprint; directly supports SOC 2 audit requirements
- Perform peer code reviews prior to deployment to validate environment configurations and product versions
- Support SOC 2 audits by compiling technical evidence, producing security documentation, and streamlining compliance reporting
- Conduct DR testing by validating backup integrity and recovery procedures; ensuring availability and compliance with RTOs, and documenting results for audit readiness
- Provide on-call support as member of Incident Response team for critical infrastructure, including troubleshooting and uptime maintenance
- Lead deployment process for new features by designing and managing Helm charts, configuring Kubernetes namespaces and network services, and enforcing deployment standards; enabling scalable, fault-tolerant infrastructure
- Integrate Oxipng into CI/CD pipelines to compress large images without quality loss; optimizing website performance and reducing bandwidth usage
- Manage and secure SaaS applications by implementing 2FA and SSO for passwordless authentication; strengthening access security and simplifying user onboarding across multiple platforms
- Optimize cloud infrastructure by replacing instances and upgrading instance types; improving performance, enhancing scalability, and reducing operational costs
- Monitor and triage Jira tickets across security and development teams, improving resolution time by **35%** through structured prioritization and follow-up

IT Security Administrator/ Test Engineer (Contract)

Feb 2023 – Feb 2025

Meshify

Remote

- Streamlined user administration across multiple platforms while adhering to Role-Based Access Control (RBAC) standards, reducing monthly operational costs by \$4,000.
- Achieved SOC 2 compliance by conducting audits of 97 vendors within the organization, ensuring adherence to security standards and regulatory requirements.
- Implemented single sign-on (SSO) across applications using Google Cloud Platform/Workspace, enhancing user authentication and access management efficiency.
- Used Terraform to automate infrastructure provisioning and management for AWS environments, adhering to Infrastructure as Code (IaC) principles
- Crafted and upheld security policies and procedures to ensure robust protection and compliance.

Cloud Analyst

Nov. 2022 – Feb 2025

MEDITECH

Canton, MA

- Deployed 5 cloud-native services and applications to support internal operations and customer-facing environments, catering to diverse business needs and enhancing overall service delivery.
- Automated the creation and management of over 200 firewall rules using Terraform, assuring seamless integration with existing infrastructure and enhancing network security measure.
- Provided troubleshooting support to address 20 network issues reported by customers, ensuring timely resolution and maintaining high levels of customer satisfaction.
- Leveraged OpenSSL to generate 15+ Certificate Signing Requests (CSRs) for X.509 certificates, and successfully installed certificates in the Windows Store Manager, securing public communication channels.
- Administered server patch management through WSUS, maintaining system security with the latest updates and security patches.

- Automated tenant provisioning and infrastructure maintenance using Terraform, with a focus on creating VPCs, APIs, IAM policies, and managing virtual machines (VMs) to streamline cloud deployments.

System and Support Analyst II (Contract)

Aug 2022 – Nov 2022

Mingledorffs

Peachtree Corners, GA

- Acted as the first line of defense in addressing 2 security incidents and assisted in analyzing dashboard data to help identify potential threats, contributing to the company's efforts in maintaining a secure environment.
- Administered Active Directory (AD) by creating a combined 50 users, groups and organizational units following least privilege, complying with security standards and reducing risk of unauthorized access.
- Provided Microsoft Exchange email support to 300 users, allowing seamless communication for users and troubleshooting any issues, maintaining uninterrupted email services.
- Utilized Mimecast to analyze and respond to 10+ alerts daily, effectively identifying and mitigating spam and phishing threats, thus bolstering enterprise security posture and protecting sensitive data.
- Improved security posture for 75 endpoints by managing patch updates, assisting end-users, remotely installing software, and proactively pushing updates to enhance endpoint security.

IT Support Specialist

April 2022 – Aug 2022

Chicken Salad Chick

Atlanta, GA

- Implemented user account management in Azure AD (Microsoft Entra), providing access for 150 franchisees and employees while configuring multi-factor authentication (MFA).
- Managed KnowBe4 security awareness program for 100+ employees, improving cybersecurity training and policy compliance.

EDUCATION

Western Governors University

Sept 2025 – Present

B.S. in Computer Science, Remote

Gwinnett Technical College

Aug 2021 – Dec 2023

Associate's in Cybersecurity, Lawrenceville, GA

CERTIFICATIONS

CompTIA Security+

AWS Certified Cloud Practitioner

AWS Solutions Architect (AWSAA)

eJPTv2 (Junior Penetration Tester)

Certified Kubernetes Administrator (CKA)

HashiCorp Terraform Associate (003)

Red Hat Certified System Administrator (RHCSA)

TECHNICAL SKILLS

Languages / Development: Golang (Go), Python, Bash, PowerShell, Terraform, Ansible

AppSec / Security Tools: Dastardly (DAST), OWASP ZAP, Burp Suite, Wireshark, Metasploit, MFA, SAML

Containers / Orchestration: Kubernetes (K8s), Docker, Helm, ECS/ECR

Cloud / DevOps: AWS, Azure, GCP, CircleCI, ArgoCD, Terraform (IaC)

Developer Tools: Git, Postman, VS Code, Codium, GitHub, Bitbucket

Compliance / Governance: SOC 2, GDPR

Collaboration: Slack, Jira, Confluence, Discord, MS Teams, Google Workspace, MS O365

SECURITY PROJECTS

ASR-as-Code | <https://github.com/J-c0d3-4Fun/ASR-as-Code> | AWS SDK, Golang (Go)

Aug. 2025 - Present

Developed ASR-as-Code, a Go-powered open-source framework using the AWS SDK to automate cloud misconfiguration detection (S3 encryption, access controls, policies) and provide remediation guidance, with a roadmap to extend coverage to IAM, EC2, and VPC

C-Dev-Sandbox | <https://github.com/J-c0d3-4Fun/C-Dev-Sandbox> | C, Network Programming, Systems Development

Engineering journal documenting progression from C fundamentals through memory management, pointers, network programming, and low-level systems concepts; foundation for building Red Team tooling, malware development, and custom exploitation frameworks

Active Directory Attacks Lab by Altered Security (CRTP in progress)

2025 - Present

Lab training covering Active Directory exploitation techniques, lateral movement, privilege escalation, and post-exploitation strategies in enterprise environments.

CVE Dashboard | Internal API, National Vulnerability Database, GitHub Advisories (Golang)

Engineered a vulnerability tracking dashboard using a custom-built internal API to query the National Vulnerability Database and GitHub Advisories; enables real-time monitoring and assessment of emerging vulnerabilities.

Offensive Security and Bug Bounty Hunting

Active participant in Hack The Box CBBH labs and PortSwigger Web Security Academy; gained hands-on experience with real-world web app vulnerabilities and exploit chains.
